

Consumer Confidence Report for Calendar Year 2022

Este informe contiene informactión muy importante sobre el aqua usted bebe. Tradúscalo ó hable con alguien que lo entienda bien.

Public Water System ID Number	Public Wate	Public Water System Name					
AZ0410408	Trails West N	ИНР					
Contact Name and Title	-	Phone Number	E-mail Address				
Lacey Merritt, Compliance Manager		520-649-0720	compliance@southwesternutility.com				
We want our valued customers to be informed about their water quality. If you would like to learn, please contact Jason Long at 520-431-7723							

Drinking Water Sources

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals, and in some cases, radioactive material, and can pickup substances resulting from the presence of animals or from human activity.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Our water source(s):	Two consecutive connections with Voyager Water Company AZ0410035
----------------------	--

Consecutive Connection Sources

A public water system that receives some or all of its finished water from one or more wholesale systems by means of a direct connection or through the distribution system of one or more consecutive systems. Systems that purchase water from another system report regulated contaminants detected from the source water supply in a separate table.

PWS # AZ0410035 – Voyager Water Company provides us a consecutive connection source of water.

Drinking Water Contaminants

Microbial Contaminants: Such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife

Inorganic Contaminants: Such as salts and metals that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming

Pesticides and Herbicides: Such as agriculture, urban storm water runoff, and residential uses that may come from a variety of sources

Organic Chemical Contaminants: Such as synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and also may come from gas stations, urban storm water runoff, and septic systems.

Radioactive Contaminants: That can be naturally occurring or be the result of oil and gas production and mining activities.

Vulnerable Population

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. Some people may be more vulnerable to contaminants in drinking water than the general population.

Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV-AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers.

For more information about contaminants and potential health effects, or to receive a copy of the U.S. Environmental Protection Agency (EPA) and the U.S. Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and microbiological contaminants call the EPA *Safe Drinking Water Hotline* at 1-800-426-4791.

Source Water Assessment

Based on the information currently available on the hydrogeologic settings of and the adjacent land uses that are in the specified proximity of the drinking water source(s) of this public water system, the department has given a low risk designation for the degree to which this public water system drinking water source(s) are protected. A low risk designation indicates that most source water protection measures are either already implemented, or the hydrogeology is such that the source water protection measures will have little impact on protection. Further source water assessment documentation can be obtained by contacting ADEQ.

Definitions

Level 1 Assessment: A vary detailed study of the water system to identify potential problems and determine (if possible) why an <i>E. coli</i> MCL violation has occurred and/or why total coliform bacteria was presentMillirems per year (MREM): A measure of radiation absorbed by the bodyAction Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment, or other requirementsNot Applicable (NA): Sampling was not completed by regulation or was not requiredMaximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking waterNot Detected (ND or <): Not detectable at reporting limitMaximum Contaminant Level (MCL): The highest level of a contaminant in drinking water below which there is no known or expected risk to healthNotmannet Level (MRDL): The level of a disinfectant added for water treatment that may not be exceeded at the consumer's tapNot Applicable (NA): Sampling was not completed by regulation or was not requiredMaximum Residual Disinfectant Level (MRDL): The level of disinfectant added for water treatment that may not be exceeded at the consumer's tapNot Applicable (NA): Sampling was not completed by not Acter (ND or <): Not detectable at reporting limit Not Detected (ND or <): Not detectable at reporting limit Nephelometric Turbidity Units (NTU): A measure of water clarityMaximum Contaminant Level Goal MCLG): The level of disinfectant added for water treatment that may not be exceeded at the consumer's tapPicocuries per liter (pCi/L): Measure of the radioactivity in water ppm: Parts per million or Milligrams per liter (µg/L) ppm x 1000 = pptPD: Parts per quadrillion or Nanograms per liter (ng/L)ppm x 1000 = ppt	Treatment Technique (TT) : A required process intended to reduce the level of a contaminant in drinking water	Minimum Reporting Limit (MRL): The smallest measured concentration of a substance that can be reliably measured by a given analytical method				
system to identify potential problems and determine (if possible) why an <i>E. coli</i> MCL violation has occurred and/or why total coliform bacteria was present Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment, or other requirements Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water Maximum Contaminant Level Goal MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health Maximum Residual Disinfectant Level (MRDL): The level of disinfectant added for water treatment that may not be exceeded at the consumer's tap system to identify potential problems and determine (if not Detected (ND or <): Not detectable at reporting limit Not Detected (ND or <): Not detectable at reporting limit Nephelometric Turbidity Units (NTU): A measure of water clarity Million fibers per liter (MFL) Picocuries per liter (pCi/L): Measure of the radioactivity in water ppm: Parts per million or Milligrams per liter (mg/L) ppt: Parts per trillion or Nanograms per liter (ng/L) ppm x 1000 = ppb pm x 1000 = ppt		Millirems per year (MREM): A measure of radiation				
 why total coliform bacteria was present Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment, or other requirements Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water Maximum Contaminant Level Goal MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health Maximum Residual Disinfectant Level (MRDL): The level of disinfectant added for water treatment that may not be exceeded at the consumer's tap Not Detected (ND or <): Not detectable at reporting limit Nephelometric Turbidity Units (NTU): A measure of water clarity Million fibers per liter (MFL) Picocuries per liter (pCi/L): Measure of the radioactivity in water ppm: Parts per million or Milligrams per liter (mg/L) ppt: Parts per trillion or Micrograms per liter (µg/L) ppt: Parts per trillion or Nanograms per liter (ng/L) ppm x 1000 = ppb ppd: Parts per quadrillion or 	system to identify potential problems and determine (if

Lead Informational Statement:

Lead, in drinking water, is primarily from materials and components associated with service lines and home plumbing. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Trails West MHP is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at www.epa.gov/safewater/lead.

Water Quality Data – Regulated Contaminants

Microbiological (RTCR)	TT Violation Y or N	Number of Positive Samples	Positive Sample(s) Month & Year	MCL	MCLG	Likely So	urce of Contamination
E. Coli	Ν	0	n/a	0	0	Human and	animal fecal waste
Fecal Indicator (coliphage, enterococci and/or E. coli)	Ν	0	n/a	0	0	Human and	animal fecal waste
Disinfectants	MCL Violation Y or N	Running Annual Average (RAA)	Range of All Samples (Low-High)	MRDL	MRDLG	Sample Month & Year	Likely Source of Contamination
Chlorine/Chloramine (ppm)	N	0.40 ppm	0.21 – 0.99	4	4	2022	Water additive used to control microbes
Disinfection By-Products	MCL Violation Y or N	Running Annual Average (RAA) <u>OR</u> Highest Level Detected	Range of All Samples (Low-High)	MCL	MCLG	Sample Month & Year	Likely Source of Contamination
Haloacetic Acids (HAA5) (ppb)	Ν	No Detect	0	60	N/A	7/2022	Byproduct of drinking water disinfection
Total Trihalomethanes (TTHM) (ppb)	N	4.1 ppb	4.1 – 4.1	80	N/A	7/2022	Byproduct of drinking water disinfection
Lead & Copper	MCL Violation Y or N	90 th Percentile	Number of Samples Exceeds AL	AL	ALG	Sample Month & Year	Likely Source of Contamination
Copper (ppm)	Ν	0.035 ppm	0	1.3	1.3	9/2021	Corrosion of household plumbing systems; erosion of natural deposits
Lead (ppb)	Ν	No Detect	0	15	0	9/2021	Corrosion of household plumbing systems; erosion of natural deposits

Violation Summary (for MCL, MRDL, AL, TT, or Monitoring & Reporting Requirement).

Violation Type	Explanation, Health Effects Time Period		Corrective Actions					
Chlorine – Late Reporting MRDL	No Health Effects, Late Reporting January – March 2022 No Action Necessary

Copper (ppm)	N	0.04 ppm	0	1.3	1.3	6/2022	Corrosion of household plumbing systems; erosion of natural deposits
Lead (ppb)	Ν	No Detect	0	15	0	6/2022	Corrosion of household plumbing systems; erosion of natural deposits
Inorganic Chemicals (IOC)	MCL Violation Y or N	Running Annual Average (RAA) <u>OR</u> Highest Level Detected	Range of All Samples (Low-High)	MCL	MCLG	Sample Month & Year	Likely Source of Contamination
Arsenic ¹ (ppb)	Ν	2.3 ppb	1.8 - 2.3	10	0	2/2020	Erosion of natural deposits, runoff from orchards, runoff from glass and electronics production wastes
Barium (ppm)	N	0.042 ppm	0.035 - 0.042	2	2	2/2020	Discharge of drilling wastes; discharge from metal refineries; Erosion of natural deposits
Fluoride (ppm)	Ν	0.24 ppm	0.2 - 0.24	4	4	2/2020	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
Nitrate ² (ppm)	Ν	0.69 ppm	0.58 - 0.69	10	10	2022	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits

¹ Arsenic is a mineral known to cause cancer in humans at high concentration and is linked to other health effects, such as skin damage and circulatory problems. If arsenic is less than or equal to the MCL, your drinking water meets EPA's standards. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water, and continues to research the health effects of low levels of arsenic.

² Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause "blue baby syndrome." Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant, and detected nitrate levels are above 5 ppm, you should ask advice from your health care provider.

Violation Summary (for MCL, MRDL, AL, TT, or Monitoring & Reporting Requirement)

Violation Type	Explanation, Health Effects	Time Period	Corrective Actions					
Chlorine – Late Reporting MRDL	No Health Effects, Late Reporting January – March 2022 No Action Necessary
